Dear Dr. Lederberg:

Thank you for the enclosed material. Crow and I both have copies, and we are returning it.

The value of a statistical study such as this one is that it suggests clinical studies. I believe one of Crow's students is making a clinical study of a racially homogeneous group in North Dakota, including tests of the blood of parents and children. It will be interesting to review the results of these tests.

Regards, as ever

J. L. Brenner
